

Statistical Reporting—the mandated process of submitting detailed policy and claims data by insurance carriers to state regulators.

The Problem:

The statistical reporting function relies on costly legacy technology and labor-intensive processes requiring years of domain-specific experience.

The Solution:

Calibris modernizes manual, legacy-driven statistical reporting through an AI-enabled, digital self-service platform that keeps carriers in control.

Simplified Reporting

- Streamline reporting through an intuitive, no-code platform for configuring data mapping and transformations.
- Put your reporting team in control with a clean, user-friendly design built for non-technical users.

Practical Compliance AI Use-Case

- Statistical reporting is a defined, rules-based process with clear compliance parameters—perfectly fit for AI.
- Structure your files into mandated formats, and guide compliance with an AI assistant built for statistical reporting.

Lower Costs & Seamless Adoption

- Realize an average 40% cost reduction over in-house or outsourced solutions.
- Adopt seamlessly with minimal operational lift and no disruption to existing workflows.

The Calbris Self-Service Reporting Platform

How the Calbris Platform Works in 3 Simple Steps:

1 Connect Your Data

Connects seamlessly with your existing policy, claims, and data systems using industry-standard formats. No system overhaul required.

2 Configure Your Rules

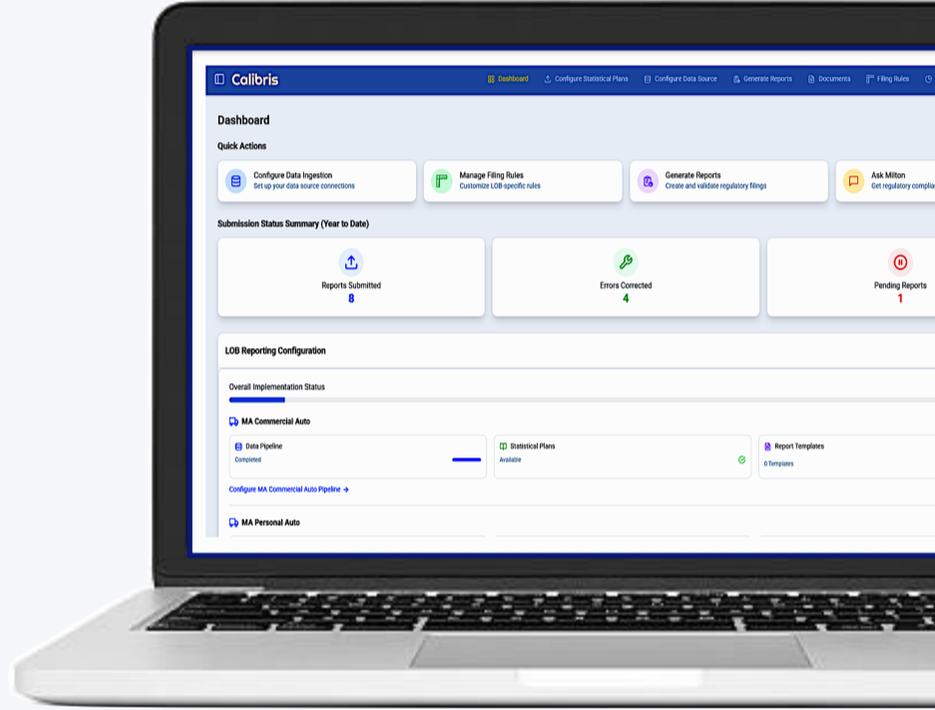

Build carrier-specific reporting rules directly in the platform without the need for IT professionals and legacy systems. Our platform adapts to your data structure.

3 Submit with Confidence

Automated validation and a pre-edit package catches errors *before* submission. AI structures files into bureau-specific formats. Human oversight ensures quality control.

“**Our workflows are all manual today. You are solving a real problem that I haven't seen any company solve until now.**”

—Statistical Reporting Manager, P&C Insurance Carrier
